Panels

Warmer, Drier and Durable Windows

EVS glazing technology provides a variety of options, that are built using a strong uPVC frames with co-extruded edge seals, that won't shrink or rot. You can select your preferred glass options with either standard glass, to maximise solar gain, or low-E panels that provide high performance insulation. The panels can be colour matched and hand painted to maintain their original character. The EVS system employs the natural process of thermal pumping to remove moisture and maintain a dry cavity for warmer and clearer windows.

Single Glazing

EVSx3 Glazing

Exceed's skilled Technicians cover most of New Zealand, providing friendly, helpful service for EVS triple retro glazing installations. Contact Exceed today!
