Retractable Pleated Screening Systems

Monarch Ex2

Monarch Ex2 is a modern, stylish, retractable insect screen which is a perfect solution to help protect your family from annoying insects. The semi-transparent pleated mesh, allows for ventilation with minimal effect on your view.

Low profile floor guide

Provides safe entry in and out of your home using our industry first 'barrier free' threshold. Standing only 3mm high, there are no unsightly or annoying channels fitted in the opening to trip over.

Glides easily

Allowing the user to gently slide the screen to any position, as it uses our unique cord operating system.

Our patented mesh retention clips keep your screen snug and help provide a more secure fit.

When not in use, your Monarch Ex2 stores almost invisibly off to the side of the opening.

Specifications

Application

This insect screen fits most door configurations, including Bi-fold doors, French doors, entry and pivot doors, stacker doors, and timber sliding doors.

Frame finish

Available in a selection of powder coated and anodised finishes.

Monarch Glide

The Monarch Glide Insect Screen offers a modern and innovative solution for large openings helping to protect your home from annoying insects. The semi-transparent pleated mesh, allows for ventilation with minimal effect on your view.

With a span of up to 3 metres high and 9.2 metres wide, the Monarch Glide Insect Screen is the perfect option for screening wide window and door configurations including, hinged, bi-fold, sliders, and French doors.

The Monarch Glide Insect Screen is designed to be retrofitted to existing systems. It can be simply pulled into place when needed and stowed in a discrete, cassette out of sight when not in use.

Low profile floor guide

Provides safe entry in and out of your home, standing only 16mm high.

Glides easily

Allowing the user to gently slide the screen to any position, as it uses our unique cord operating system. Our patented mesh retention clips help keep your screen snug and secure.

When not in use, your Monarch Glide stores almost invisibly.

Specifications

Application

This insect screen fits most window and door configurations, including Bi-folds, French doors, stacker sliding doors, and outdoor entertainment rooms.

Frame finish

Available in a selection of powder coat and anodised finishes.

Monarch Window

Monarch Window is a revolutionary slim line pleated insect screen which has been developed for use on small to large size window openings.

It is usually installed to slide horizontally, eliminating the need to reach up to the top of the window when operating the screen.

Our unique cord operating system allows you to gently slide the screen to any position in the window opening, without the need for a spring-loaded brake or manual locking device.

Smooth Operation

A series of cords assist in the motion of the screen making it smooth and easy to operate. Our patented mesh retention hooks help keep your screen snug and provide a more secure fit.

Installation

This insect screen fits neatly within the reveal or can mount directly to the window frame. Monarch window frame width is just 23mm making it a perfect fit when in openings that have curatins and blinds installed.

Specifications

Application

This insect screen fits most window configurations, including Bi-fold windows, server windows, awning windows, and casement windows.

Frame finish

Available in a selection of powder coated and anodised finishes.

Retractable Screening Systems

Ez Screen

Ez Screen is a functional roll up insect screen. This retractable insect screen can be mounted to the face of the window opening or inside the window reveal.

Simple Operation

Ez Screen is constructed with an adjustable visco dynamic cushion system that adjusts the speed of the screen, gently recoiling the sliding bar and mesh into the protective cassette without unnecessary force.

Easy installation

This screen is supplied fully manufactured to size and ready to install. By virtue of its design, Ez Screen can fit cavities as narrow as 40mm and has no visible fixings once installed.

Specifications

Application

This insect screen fits most window configurations, including Servery windows, casement windows, double-hung windows, and awning/hopper windows.

Framing

Choice of aluminium or UPVC frame

Frame finish

Aluminium available in a selection of powder coated finishes.

You can have confidence in Exceed Screening Systems.

We are proud to be recognised as New Zealand's market leaders in window and door repairs and maintenance for over 30 years.

Our established service and practices provide you with reliable installation of window and door fly screens.

Exceed's insect screens give you a modern and stylish solution for your home.

Benefits of Exceed Retractable Screening Systems

Retractable insect screens provide natural ventilation.

Helping keep your home comfortable.

Our retractable screens are perfect for your bi-fold doors or stacker doors.

They're only visible when in use and stack neatly away, out of sight when

not needed. Although they use a patented semi-transparent mesh, surprisingly when the screen is in place, your view is virtually uninterrupted.

They are usually installed on the inside of the window or door frame and do not permanently cover the opening or detract from elegant feature doors.

Retractable insect screens can help reduce the amount of dust and other airborne debris entering your home.

The protective housing used to stow the screen when not in use, eliminates dust build up that would occur on permanently fixed insect screens.

Retractable insect screens are the perfect solution for keeping out insects and retaining indoor outdoor flow.

Install one of our modern retractable screens and don't let annoying insects spoil your dinner party or leisure time again.

Contact one of our mobile specialists across New Zealand and get ready to enjoy beautiful, modern retractable insect screens installed in your home.
